1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 8 is rejected under 35 U.S.C. 102(e) as being anticipated by Tiedmann et al. (6,246,673).

For claim 8, Tiedmann et al. disclose a method for performing handoff between asynchronous base station and synchronous base station comprising the steps of:

an async demodulation module for converting a high-frequency signal from an base station to a base band signal and demodulating the base band signal by async despreading (It is inherent that there is modulation/demodulation since it is a RF system);

a sync demodulation module for converting a high-frequency signal from a sync base station to a base band signal and demodulating the base band signal by dispreading (It is inherent that there is modulation/demodulation since it is a RF system);

a switch for switching the received signal between the async and sync demodulation modules (see handoff between asynchronous and synchronous base stations in column 7 lines 62-63); and

a controller for driving the sync demodulation module for a given time interval

to acquire the timing of the sync base station during an operation in the cell of an async base station, and maintaining the acquired timing of a sync base station even after switching to the async demodulation module (see boxes 726 and 728 in figure 7).

2. Applicant's arguments filed 12/01/2005 have been fully considered but they are not persuasive.

Applicant traverses the rejection under 35 U.S.C 102. The traversal is based on ground that reference does not teach a switch for switching the received signal between the async and sync demodulation modules. This argument is not found to be persuasive. Applicant's attention is directed at column 7 lines 62-63 wherein it teaches the handoff (switching) between the async and sync modules.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
